DETAILED ACTION

Drawings

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the first Node B and second Node B (the Node Bs) must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Objections

2. Claim 3 is objected to because of the following informalities: in lines 12-13, there appears to be a typographical error with respect to the phrase "including TFCI information for the packet data to the first RNC **to the second Node B** using frame protocol." Compare with its corresponding wording in the 'Summary of the Invention', specification, page 8, lines 7-9. Appropriate correction is required.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

4. Claims 1-3 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

The claimed subject matter is directed to "first Node B", "second Node B" and "Node Bs". In the specification, the 'Summary of the Invention' restates the claimed subject matter. However, neither the 'Detailed Description of the Preferred Embodiment' nor the Drawings describe these terms and their arrangement (i.e. what is meant by "a second Node B adjacent to the first Node B"? does it mean that the two Node Bs are on the same RNC or on different RNCs?). Also, the 'Background of the Invention' mentions Node Bs (specification, page 4, lines 10-11), but the corresponding

Art Unit: 2662

structure in prior art Figure 3 does not appear to be a plurality of Node Bs which is confusing. Without such detailed description or drawing, it is not clear to the Examiner what is meant by "a first Node B for transmitting data on a dedicated channel (DCH) to the UE" (claim 1, lines 3-4) in context with the later limitation "transmitting the data over the DCH to the UE through the second Node B" (claim 1, lines 7-8). Does it mean that data that is to be transmitted by the first Node B is instead transmitted by the second Node B? Or is "the data" in the former expression different from the latter, such that "the data" should be distinguished in the two expressions. Compare with patent documents US 2002/0082020 A1 Figures 24+ and US 2002/0061764 A1 Figure 17A, which clearly show a plurality of Node Bs.

Conclusion

5. The claimed subject matter is distinguishable from the prior art in that the prior art fails to anticipate or make obvious the first and second Node Bs, and the first and second RNCs and their interrelated procedures.
